

Waste minimisation and recycling policy statement

QuayQuip promotes and implements a practical waste minimisation strategy for its business.

To support the philosophy and principles of the waste minimisation and recycling Policy Statement, QuayQuip will adopt a hierarchal waste management strategy in all of their affiliated companies and all of their business units.

QuayQuip will:

- Review the potential for re-use of waste material through gaining exemptions from waste management licensing regulations.
- Promote and implement the governmental and international regulations of waste reductions.
- Seek to reduce the amount of materials and resources consumed.
- Minimise the production of waste.
- Re-use surplus material whenever possible.
- Promote and implement the use of recycled materials.
- Dispose of waste in the most cost effective and environmentally effective manner.

The objective will be supported operationally by the implementation of the following tasks:

- Communication and publication of the Waste Minimisation and Recycling Policy Statement.
- The development and implementation of a waste management plan for all projects and permanent offices.
- To educate, train and motivate employees to be good waste minimisation practitioners.
- Set targets for monitoring the production and consumption of recycled materials.
- A clear environmental policy on the code of conduct for QuayQuip suppliers.
